Aircraft Statue

That sharp silhouette cutting through the air no longer belongs only to the sky. In this unique masterpiece where fiberglass and art meet, all the power and elegance of a fighter jet have been transformed into a permanent form. With the star and crescent waving proudly on it, this statue is not just a decoration object, but a reflection on the ground of a stance that makes the nation proud. Standing as a silent but powerful witness to every flight in the skies, this work is the permanent transformation of respect for art and the homeland.

What is an Aircraft Statue and Why is it So Special?

Aircraft statues are original and impressive outdoor artworks that have become favorites of institutions, municipalities, airports, school backyards, and private collectors. These statues, which masterfully reproduce the aerodynamic structure, every wing angle, and engine detail of an aircraft, evoke the feeling of a real plane in the viewer. The work in question was designed inspired by the F-16 fighter jet model and reflects this iconographic structure, which has become the symbol of the Turkish Air Force, in all its details. The star and crescent motif on its fuselage adds a national spirit to the work and makes it much more meaningful than an ordinary model.

Fiberglass Material: Long-Lasting and Durable

This aircraft statue is produced using fiberglass material. Fiberglass is one of the most preferred materials in outdoor sculpting due to both its lightness and extraordinary durability. Showing high resistance to UV rays, rain, frost, and heat, fiberglass preserves its paint and form for many years. This material, which also provides ease of installation, can be easily used in both indoor and outdoor spaces. In other words, this statue will continue to stand with the same grandeur decades

later where it is placed today.

A Custom-Made Work Produced Upon Special Order

This aircraft statue was produced entirely upon special order. Each work is brought to life from scratch in line with the dimensions and design details requested by the customer. Every size is possible, from a desktop size that fits in a small garden to a monumental scale that crowns a square. Color options, surface treatments, and the symbols on it are also completely customizable. In this way, every resulting work is not a repetition of the same model, but gains value as a one-of-a-kind structure specific to its owner. You can get information from our guide page about the ideal statue size and matters to consider before having a statue made.

Workshop Process and Craftsmanship

The aircraft statue you see in the photo was produced by the Heykel.org Art Studio. This work, exhibited in the outdoor area of the studio, was photographed during the final stage of the completion process. When the hand-crafted details on the fuselage, panel lines, and paint application are examined closely, the magnitude of the effort spent is clearly felt. Each piece was carefully shaped, and the wings and fuselage were masterfully integrated with each other. The statue production time for such works takes an average of a few months, and continuous communication is maintained with the customer throughout the process.

What Should You Do to Order?

To order an aircraft statue, you should first get information from us on the contact page for any questions you may have and direct your inquiries. After providing information about the area where the statue will be placed, the desired size, and any special details, the studio team presents you with a preliminary design and a price quote. The production process begins after approval and is completed in accordance with the specified delivery date. Support is also provided for installation, and the statue is sent with special apparatus for mounting.
