Avicenna Statue

Avicenna, one of the symbolic figures of science and enlightenment stretching from the depths of history to the present, has engraved his name in gold letters with his unique contributions to the world of medicine. Specifically designed to keep the legacy of this great genius, who influenced Eastern and Western civilizations, alive and to inspire future generations, the Avicenna Statue is both an artistic masterpiece and a tangible expression of dedication to science.

Avicenna: The Prince of Physicians and Universal Scientist

Full name Abu Ali al-Husayn ibn Abdullah ibn Sina, known in the Western world as Avicenna, was a Persian physician, philosopher, astronomer, and author who lived between 980 and 1037. Possessing deep knowledge in many fields such as medicine, philosophy, mathematics, and astronomy, Avicenna stood out especially with his works in the field of medicine. His most famous work, "The Canon of Medicine" (Al-Qanun fi't-Tibb), is an encyclopedic work consisting of five volumes and used as a fundamental resource in medical education for centuries.

Artistic and Technical Details of the Medical Statue

Designed to honor this immortal legacy of Avicenna, the medical statue dazzles with its remarkable dimensions and aesthetic appearance. This monumental work, with a total height of 3.5 meters including its pedestal, adds grandeur to its environment. The material used in the production of the statue is bronze-looking fiberglass, which reflects the noble appearance of bronze but is lighter and more durable. This material choice ensures the longevity of the statue while allowing detailed craftsmanship to come to the fore.

The statue successfully reflects Avicenna's wise stance, his commitment to science with the book he holds in his hand, and his identity as a thinker. Every detail of this work has been meticulously crafted, depicting Avicenna's period clothing and characteristic features realistically. Such statues are beyond just being a work of art; they are powerful symbols that transmit the values and ideals of the person they represent to future generations.

The Journey of Custom-Made Statue Production

This special Avicenna Statue was produced upon order for a specific institution or person. This production process shows that every stage of the statue was meticulously planned and carried out at high-quality standards. The process from the beginning of the statue's construction to its completion required great mastery and dedication. Ordered within the year 2021, it was completed within 1-2 months and sent to the relevant address. This indicates that the statue is a contemporary work and was recently introduced to the medical world or the scientific community.

The existence of this statue shows that Avicenna is not just a figure from the past, but rather a universal value that continues to inspire today. Such monuments, which can be located at the entrances of medical schools, hospitals, or science centers, instill in students, physicians, and all science enthusiasts the determination to progress in the light of science and serve humanity.
