

Sculpture Models

Sculpture Models: Real Production Cuts from the Workshop

The story of a sculpture begins with the first mark pressed into clay. Every sculpture model produced in the Heykel.org workshop takes shape on clay before being brought to life with fiberglass — a material both durable and capable of carrying the spirit of any space. In this video, you will follow different stops along that production journey through real cuts selected from various projects.

From Form to Character: The Unique Identity of Each Model

The mane of a lion's head, the tension in a bull's muscles, every fold of the military coat and kalpak on the Mustafa Kemal Pasha bust — none of these details are accidental. The sculpture production works carried out in our workshop are meticulously crafted from the clay stage onward so that each model carries its own character. The female figure holding scales as a symbol of justice, along with every other piece in this video, is a concrete reflection of that care. Producing a model is not merely pulling out a form — it is placing meaning within it.

Fiberglass: Where Art Meets Permanence

Clay is the first language through which the sculptor carries thought into space; fiberglass is where that language becomes permanent. At Heykel.org, all fiberglass sculptures are completed following the detailed work carried out on clay. This method produces lightweight and long-lasting works suited for both interior spaces and exterior facades. Every model you see in this video is the product of that production philosophy.

Model Production at Heykel.org: From the Workshop, Not a Catalog

No sculpture model leaving our workshop is a repetition from a catalog. Whether a large bull sculpture, a historical bust, or a symbolic figure — every piece is produced from scratch for that order, that space, and that vision. The works in this video are real production footage compiled from various Heykel.org projects. If you see a sculpture model as a permanent identity carved into your space, you are in the right place.
